PROFILE

Product designer and computer science student who turns messy problems into interfaces that feel easy. I design fintech, AI and consumer apps, from research and flows to polished UI, and I would rather ship something small and real than polish it forever.

SELECTED PROJECTS

PayHK — Fintech case study, 2026

Multi-currency wallet for freelancers who earn in one currency and live in another. One featured balance and four core actions: send, convert, rates, receive.

BASTION — UI/UX case study

AI-driven security intelligence dashboard for developers. Ranks alerts by severity, shows AI confidence and takes users from detection to a pull-request-ready fix.

CINERANK — UX research, mobile app

TV and cinema guide exploring how ranked lists, social proof and fast discovery change what people choose to watch.

Crypto Wallet (Vaultex) — Product UI

Simple, transparent app for buying and swapping crypto. Delivered in three phases: discovery (1 week), UX design (2 weeks) and UI design (3 weeks).

Kala — UX case study

Discover Indian art and heritage: research, flows and screens for people exploring craft traditions.

VOLT — Brand identity

Logo, type, colour and applications for a technology studio, designed to work from favicon size to full scale.

Also: Porsche 911 (case study) · yuiop (brand and web). Full case studies on [Behance](https://behance.net/hafsakhan125).

EDUCATION

B.Tech, Computer Science, 2023 – 2027
